

Our Mission

Code for Nepal was created in 2014 with a mission to help under-served populations in Nepal gain open access to data. Our main goals are to increase digital literacy, build apps to improve lives, enhance access to open data, and push for the right to information. Our dream is to empower Nepal by increasing digital literacy and the use of open data!

Be a part of the Code for Nepal community to increase access to data and digital literacy for all.

Why Volunteer

DEVELOP PROFESSIONAL EXPERIENCE

Volunteering at Code for Nepal offers a unique professional learning experience for students. Students will have the opportunity to develop their computer coding skills while testing their digital communication skills in an advanced environment. This experience will also provide students with an enhanced resume which will be marketable towards future employers.

SERVE THE UNDERPRIVILEGED

By volunteering at Code for Nepal, you are helping to provide opportunity for marginalized groups. Currently there is a significant gap in literacy from men to women of approximately 72% to 42%. There are also significant difference in privilege related to digital media knowledge and access between gender, income levels and minority status. By assisting Code for Nepal to achieve its goals, you are helping to bridge the opportunity gap and provide less fortunate with the skills and knowledge needed to digest information, market themselves, and prosper in a digital society.

How to Volunteer

You can make a difference right from your couch, by building tools, scrapping data or helping us crowd source and verify information. If you would like to volunteer, intern or want to help us in another way, visit our website, <http://codefornepal.org>, and fill out the volunteer form. Here, you can tell us about yourself, as well as what you would like to do to help out.
